

Benefits at a glance

- Reach from one to an unlimited number of people, instantaneously and simultaneously
- Deliver critical information authenticated by the genuine voice of the caller
- Reliable delivery with no need for recipients to be connected to the Internet or to be logged in any application
- Recipients can listen to their messages in real time when driving with no distractions
- Detailed reporting to be always informed about which recipients listened to a message and when
- Enterprise class service with round-the-clock support, to provide whatever help you may need

VoiceYou is an unique voice based communication technology that allows a single caller to reach from one up to an unlimited number of people simultaneously. A technology that enables communication in a way like never before.

Recipients only need a phone, of any type, to receive the call, with no need of an Internet access.

The message is delivered instantaneously and simultaneously to all recipients, who can hear the genuine voice of the caller.

A traffic report is generated for each message delivery.

The service includes provisioning, configuration and full, on-going maintenance, management and monitoring.

Key use cases

Capital markets

Deliver daily recorded market updates' messages to an unlimited number of agents and brokers in a secure and real time fashion and get confirmation that recipients have received the call.

Travel industry

Instantaneously reach all travellers with real-time updates and alerts wherever they are, independently of whether Internet access is available, getting their immediate attention by means of a compelling phone ringing sound.

Government

Deliver important messages to citizens about local events and incidents even in disperse areas with no Internet access and to people that are not Internet savvy.

Corporate internal needs

Provide urgent sales updates to employees and agents in a safe manner with no need for them to read texts while driving their car.

Powered by Colt

VoiceYou messages are delivered through the Colt network. Colt is the information delivery platform, delivering integrated network, data centre, voice and IT services. Colt operates in 28 countries across Europe, Asia and in the U.S. with connections into over 200 cities globally and metropolitan area networks in 47 cities. Colt owns 22 carrier-neutral data centres in Europe and manages a further 7 in the Asia-Pacific region.
