

Environmental Policy Statement

colt

Colt's vision is to be the most customer orientated business in our industry.

As an ISO 14001 certified organisation, Colt aims to offset its environmental impact by enhancing its environmental performance and by eliminating or reducing environmental pollution, where technically, organisationally, and economically feasible.

The two guiding principles of our environmental management efforts are: accepting our responsibility and ensuring transparency.

We, at Colt, strive to adopt the highest standards and behaviours in all areas of our operations, meeting all legislative criteria, by:

- Ensuring the company promotes and encourages best practice and innovation through our employees, contractors and products/services.
- Establishing and maintaining an environmental strategy and action plan, including objectives and targets, and monitor environmental performance to deliver on our objectives.
- Actively working with our customers to achieve mutual continual improvement in regards to environmental performance.
- Mitigating waste production and promote recycling throughout the company.
- Preventing pollution and protecting our environment - we reduce, and wherever possible, eliminate the release of substances which may cause demonstrable damage to the environment or its inhabitants.
- Complying with all applicable environmental legislation and other requirements, being constantly aware of the legal responsibilities in the geographies where we operate.
- Maintaining compliance and accreditation to the requirements of ISO 14001:2015.
- Mitigating the creation of waste and recycling materials where this is cost effective and environmentally beneficial.
- Risk Reduction - we will reduce the risk of environmental harm by using suitable technologies and operating procedures. We prepare contingency plans to deal with environmental incidents.
- Delivery and Purchase of Services and Products - we mitigate adverse environmental impacts of the services which we deliver by using the best available technology not entailing excessive cost. We include environmental considerations in investment decisions for new plant, equipment or working practices.
- Environmental Responsibility and Environmental Enhancement - we actively monitor the implementation of our Environmental Policy, both internally and with our clients.
- Training - we ensure that our entire team is aware of their environmental responsibilities relating to the Environmental Policy. We encourage employees and customers to report any matter that they think is a danger to the environment.

We create and maintain an environmental management system to ensure that our Management Teams are kept informed of and are fully committed to and responsible for improving Colt's environmental performance.
